

# Operating Instructions for use of MARTOR-EASYSAFE

## MARTOR-Easysafe

### Lock Screw Wrench No. 9890

A special tool designed to unlock the blade change cap. The Lock Screw Wrench must be ordered separately.

### Use:

The integrated tape slitter safely cuts packaging tape without an exposed blade.

The Easysafe features a patented cutting head design allowing for easy initiation of the cut while maintaining blade contact with the material, even on single layers of film or paper.

For trouble free work with plastic box strappings. **IMPORTANT:** Strappings always should be cut with a diagonal stroke!

### Blade change:

Pull out the blade carrier from the handle...

...open the blade cover and reverse or change the Blade No. 45 (or stainless No. 145).

The cutter is capable of being locked with a special key No. 9890 to change the blade. For use in the sensitive-products industries, e.g. food, designed to exclude hygienic risks resulting from unauthorized blade changes.

### Waste management of blades:

**!** Never throw used blades into the wastepaper! High risk of injury!

MARTOR SAFEBOX No. 108000 - another novel contribution to SAFETY: Designed to snap-off used blade sections and/or to SAFE - keep used blades (max. length 62 mm). To empty the contents, fold the "outer case" back by 180 degrees.

The transparent cover can now be opened and the contents be emptied, preferably, into the MARTOR USED BLADE CONTAINER No. 9810 - WALL MOUNT BRACKET optional.
